

## Measuring your pet with a homemade caliper

Materials needed:

- Flattened cardboard box
- Wooden ruler or T-square
- Marker
- Cardboard cutter or razor knife.

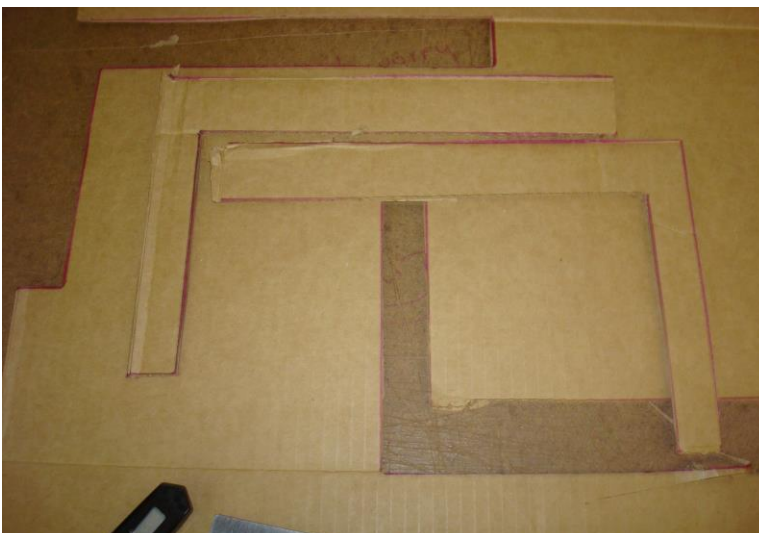

### STEP 1

Place your straight edge along your cardboard seam and edge and use your marker to make a line. Make two outlines.

### STEP 2

Use your cardboard cutter to cut out the two right angle forms. Now you have two arms of a caliper.

### STEP 3

Attach together with a paper clip.

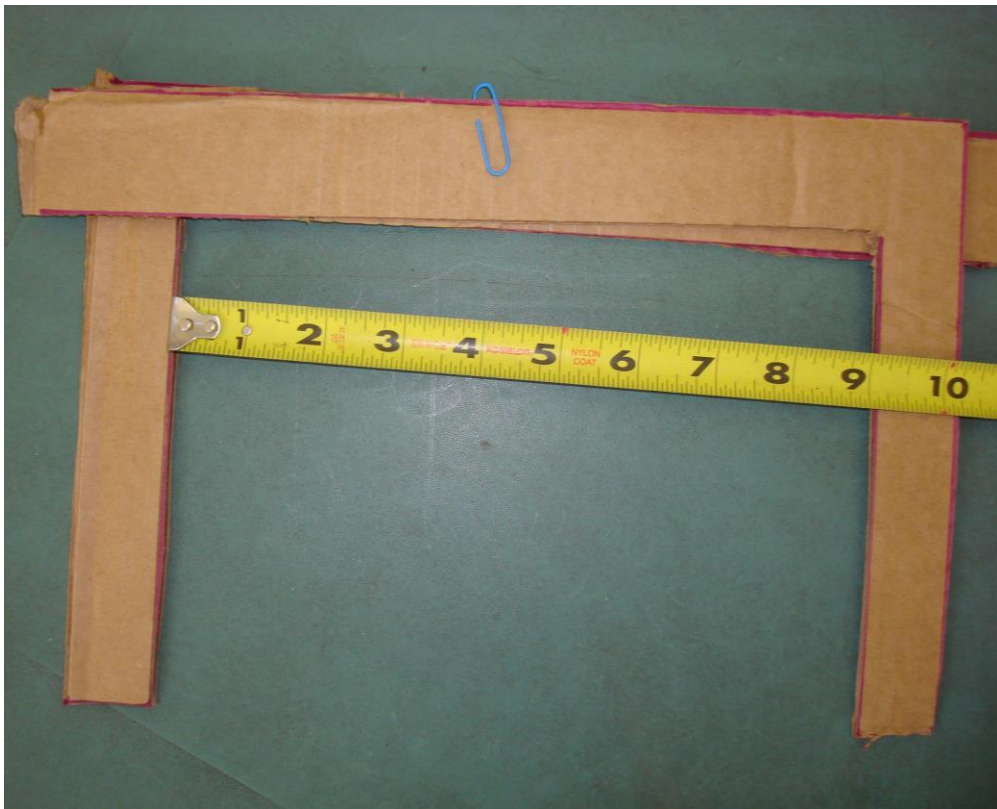

### STEP 4

Hold your cardboard caliper over the pet's shoulders so that the points of the caliper barely touch the pet.

**STEP 5**

Measure between the arms of the caliper.

**STEP 6**

Repeat at the ribs and rump.

Voila!
