

How to Make a Homemade Caliper to Measure “E”

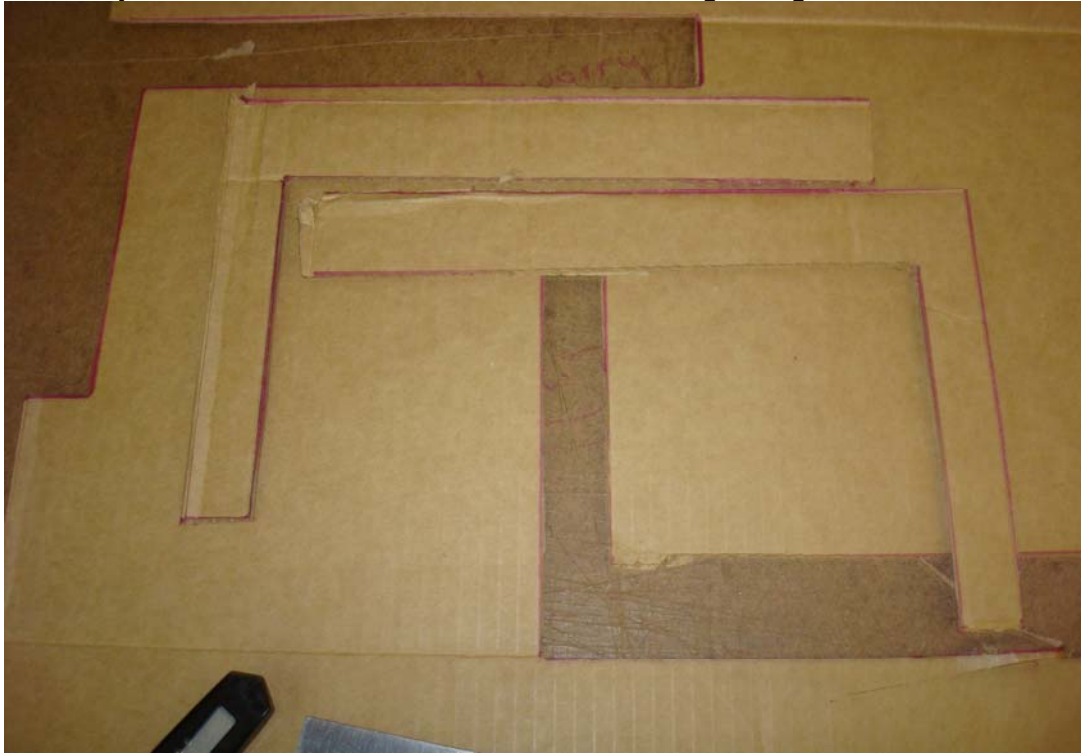

1. Assemble your materials: a flattened cardboard box, a wooden ruler or T-square, a marker and a cardboard cutter or razor knife.

2. Place your straight edge along your cardboard seam and edge and use your marker to make a line. Make two outlines.

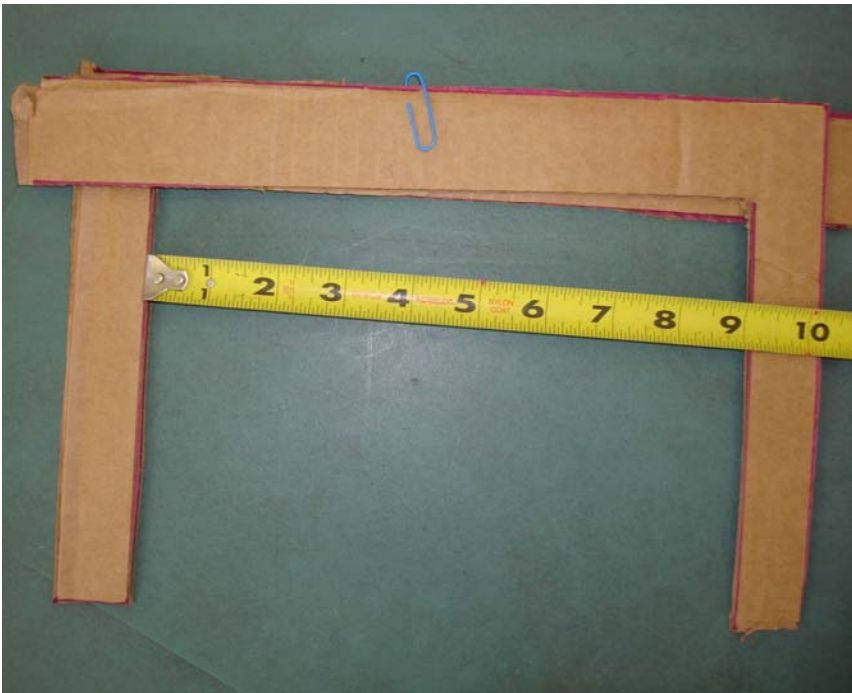

3. Use your cardboard cutter to cut out the two right angle forms.

4. Now you have two arms of a caliper. Attach with a paper clip.

5. Hold your cardboard caliper over the dog's shoulders so that the points of the caliper barely touch the dog.

Measure between the arms of the caliper. Repeat at the ribs and rump.
